

Oracle Cloud Architect Associate Certification: Your Path to Success

What is *Oracle Cloud Infrastructure Certification*?

Oracle Cloud Infrastructure (OCI) certification proves you know how to use Oracle's cloud services. It shows employers you have the skills to build and manage solutions on **OCI**.

Why Get the *OCI Architect Associate Exam Certification*?

Want to boost your career? The **Oracle Cloud Architect Associate Certification** can help! It validates your skills and makes you more attractive to companies looking for cloud experts.

Plus, many companies are looking for *OCI Solutions Architect* to design and deploy solutions.

Understanding the [*1Z0-1072-23 Exam Guide*](#)

The **1Z0-1072-23 exam** is your gateway to becoming a certified **Oracle Cloud Architect Associate**. An *exam guide* will outline topics you need to study. It's your roadmap to success.

How to Pass *1Z0-1072-23: Tips and Tricks*

Passing the **1Z0-1072-23 exam** requires preparation. Start by understanding the exam objectives. Then, practice! Use *practice questions* to test your knowledge and identify weak areas. And remember to use *Oracle Cloud Free Tier* to practice.

Where to Find *Oracle Cloud Infrastructure Training*

Oracle offers training courses to help you prepare for the exam. Look for official training materials and consider online courses. Hands-on experience is very helpful.

- Official Oracle Training
- Online Courses
- Hands-on Labs

Practicing with *1Z0-1072-23 Practice Questions*

Using [*practice questions*](#) will help you get to know the pattern of the actual questions that come in the exam.

What is the *OCI Certification Path*?

The **OCI Architect Associate** certification is just one step. Oracle offers a full certification path. You can progress to professional and master levels as you gain more experience.

Levels of OCI Certification:

- Associate
- Professional
- Master

How Much Does the 1Z0-1072-23 Exam Cost?

The **1Z0-1072-23 exam** cost varies depending on your location. Check the official Oracle website for the most up-to-date pricing information.

Oracle Cloud Architect Associate Salary: What to Expect

An *Oracle Cloud Architect Associate Salary* depends on experience, location, and company. Research average salaries in your area to get an idea of potential earnings. A certification helps you negotiate a higher salary.

OCI Architect Associate Jobs: Finding Opportunities

Many companies are hiring **OCI Architects**. Search online job boards for "Oracle Cloud Architect" or "OCI Architect" positions. Highlight your certification and **OCI** experience on your resume.

List of Oracle Cloud Services

Oracle Cloud provides numerous services like compute, storage, database, networking, analytics, and more. Explore the *Oracle Cloud Services List* to see the full range of offerings.

Key Services:

- Compute
- Storage
- Database
- Networking
- Analytics

Becoming an OCI Architect

Becoming an OCI architect requires a combination of education, experience, and certification. Continuously learn and stay updated with the latest **OCI** features.

Conclusion

Getting your **Oracle Cloud Architect Associate Certification** takes time and effort. But with the right preparation, you can achieve your goals and unlock new career opportunities! It will help you to land better *OCI Architect Associate Jobs*.

Real Exam Questions 2025

Below given questions are for demo purposes only. **The full version** is up-to-date and contains actual questions and answers.

Why Choose CertKillers?

Actual Exam Questions: We provide real exam questions updated regularly.

Exam Dumps: Downloadable PDFs with comprehensive questions and answers.

Weekly Live updates: Study Material questions and answers – Live updates.

Practice Tests: Practice tests and VCE PDF to assess your readiness.

Multi-Lingual Support: Full Version products available for download in all popular languages.

Success Guarantee: Pass your exam on the first attempt or get a refund.

Up-To-Date Test Questions: Up-to-Date Test Prep Questions that cover 2025 syllabus.

Instant Download: Instant download after successful payment.

Version: 4.1

Question: 1

Oracle Cloud Agent is a lightweight process that manages plugins running on compute instances. Which is NOT a valid Oracle Cloud Agent plugin name?

- A. Live Migration Agent
- B. OS Management Service Agent
- C. Compute Instance Run Command
- D. Bastion

Answer: A

Explanation:

Bastion is not a valid Oracle Cloud Agent plugin name. Bastion is a service that enables secure and controlled access to compute instances in OCI. The other options are valid plugin names that provide different functionalities for the instances. Reference: [Bastion], [Cloud Agent Plugins]

Question: 2

You are part of a team that manages a set of workload instances running in an on-premises environment. The Architect team is tasked with designing and configuring Oracle Cloud Infrastructure (OCI) Logging service to collect logs from these instances. There is a requirement to archive Info-level logging data of these instances into the OCI Object Storage.

Which TWO features of OCI can help you achieve this?

- A. Cloud Agent Plugin
- B. Grouping Function
- C. Service Connectors
- D. Agent Configuration
- E. ObjectCollectionRule

Answer: A, C

Explanation:

Cloud Agent Plugin and Service Connectors are two features of OCI that can help collect logs from on-premises instances and archive them into OCI Object Storage. Cloud Agent Plugin is a component of the OCI Logging service that can be installed on any Linux or Windows instance to collect logs and send them to OCI. Service Connectors are components of the OCI Service Connector Hub that can transfer data between different OCI services, such as Logging and Object Storage. The other options

are not relevant for this requirement. Reference: [Cloud Agent Plugin], [Service Connectors]

Question: 3

You create a file system and then add a 2 GB file. You then take a snapshot of the file system. What would be the total meteredBytes shown by the File Storage service after the hourly update cycle is complete?

- A. 3 GB
- B. 2.5 GB
- C. 4 GB
- D. 2 GB

Answer: D

Explanation:

The total meteredBytes shown by the File Storage service after the hourly update cycle is complete would be 2 GB. This is because snapshots do not consume any additional storage space unless there are changes made to the file system after taking the snapshot. Since no changes were made in this scenario, the snapshot would not add any extra storage cost. Reference: [Snapshots and MeteredBytes]

Question: 4

You are part of an organization with thousands of users accessing Oracle Cloud Infrastructure (OCI). An unknown user action was executed resulting in configuration errors. You are tasked to quickly identify the details of all users who were active in the last six hours along with any REST API calls that were executed.

Which OCI service would you use?

- A. Notifications
- B. Service Connectors
- C. Notifications
- D. Logging
- E. Audit

Answer: E

Explanation:

Audit is the OCI service that would help identify the details of all users who were active in the last six hours along with any REST API calls that were executed. Audit is a service that records all API calls and other actions taken by or on behalf of users in OCI. It can be used to track user activity, monitor compliance, and troubleshoot issues. The other options are not suitable for this task. Reference: [Audit]

Question: 5

You have an instance running in Oracle Cloud Infrastructure (OCI) that cannot be live-migrated during an infrastructure maintenance event. OCI schedules a maintenance due date within 14 to 16 days and sends you a notification.

What would happen if you choose not to proactively reboot the instance before the scheduled maintenance due date?

- A. The instance will get terminated.
- B. The instance is either reboot-migrated or rebuilt in place for you.
- C. You will receive another notification to reboot within the next 14 days.
- D. You will receive another notification to reboot within the next 7 days.

Answer: B

Explanation:

If you choose not to proactively reboot the instance before the scheduled maintenance due date, the instance is either reboot-migrated or rebuilt in place for you. Reboot-migration is a process where OCI migrates your instance to a new physical host without changing its configuration or public IP address. Rebuild in place is a process where OCI shuts down your instance, performs maintenance on the physical host, and restarts your instance with the same configuration and public IP address. The other options are not correct. Reference: [Reboot-Migration], [Rebuild in Place]
