**Question: 3**

---

An administrator has configured the following settings:

```
config system global
```

```
set log-checksum md5-auth
```

```
end
```

What is the significance of executing this command?

A. This command records the log file MD5 hash value.

### Question: 5

---

For which two purposes would you use the command set log checksum? (Choose two.)

- A. To help protect against man-in-the-middle attacks during log upload from FortiAnalyzer to an SFTP server
- B. To prevent log modification or tampering
- C. To encrypt log communications
- D. To send an identical set of logs to a second logging server

---

**Answer: A, B**

---

**Explanation:**

To prevent logs from being tampered with while in storage, you can add a log checksum using the config system global command. You can configure FortiAnalyzer to record a log file hash value, timestamp, and authentication code when the log is rolled and archived and when the log is uploaded (if that feature is enabled). This can also help against man-in-the-middle only for the transmission from FortiAnalyzer to an

SSH File Transfer Protocol (SFTP) server during log upload.
